Variant command AutoCAD allows creating a variant by using the New command. This command creates a new drawing file with the same name as the currently active drawing and all existing drawing objects, but it does not perform any editing or conversion actions. The variant drawing file, which is typically stored in the memory of the computer, can be used to create additional drawing objects, save the drawing as a DXF file, or export the drawing to an image format, such as Portable Network Graphics (PNG) or Joint Photographic Experts Group (JPEG) file format. AutoCAD also supports macros that can be automatically saved and loaded as a.AAS or.ARC file, which is read by the eXtended Authoring Tool to edit the drawing objects in place. For large drawings, the Text.avi file format can be used to store the drawing. Textile extensions AutoCAD supports two extensions to the native text support: text-encoding and text-wrap. Text-encoding provides conversion of text symbols into AutoCAD Text so that they can be edited and rendered, i.e., converted into AutoCAD symbols. Text-wrap provides handling of text with mixed dimensions, i.e., a text line that does not fit within the dimensions of the object it is attached to (such as a viewport) but fits within the dimensions of the text symbol. Collision detection The ability to detect collision between objects is available through the use of collisions, which are defined by the user through the use of the Collision editor in the Properties Editor. Collision is performed through the use of a graphical representation of a contact mesh, created by the application in the case of explicit collision detection and through the use of a mathematical representation of the collision in the case of implicit collision detection. Vertex colors Although the standard colors are supported by the Color dialog, users can apply their own custom colors. The colors are represented by an RGB triplet where each component can take values between 0 and 1. For example, the color green is represented by the triplet (0.0, 1.0, 0.0), and red is represented by the triplet (1.0, 0.0, 0.0). Object file format The drawing files produced by AutoCAD have the .dwg extension. The XML format of these files is identical to the native a1d647c40b
